WELC'ON DOOR

WELC'ON DOOR is the universal system SAIMA has realized in order to apply quotas and manage the access control of places with a large flow of people in transit. This turnstile, which can be applied to any kind of existing door, does not need to be fixed to the ground and it can be used at any distance from the door, even occasionally. In addition, WELC'ON DOOR can be integrated with a body temperature measuring system and o with a people counter device too. In case WELC'ON DOOR is equipped with a people counter tool, it does not allow entering the area when the maximum number of allowed people is reached, (this value can be previously set).

ARIA BUONA

ARIA BUONA is a UVC light generator that uses the natural purifying action of the sun rays to sanitize the air inside closed environments which is able to eliminate the presence of bacteria and any kind of virus included Covid 19. It is an absolutely "green" air purifier system, composed by UV-C lamps and filters that use Tiox® technology to make safe any crowded places such as waiting rooms, offices, elevators, 24 hours a day.

SAFE TAG

SAFE TAG is a system for tracking interactions at risk of contagion particularly suitable for schools or companies. The company/school adopting such a solution provides its users with a Smart Badge (a light device less than one centimeter thick) able to determinate a relative distance among people, so that users will be advised to be in a risk status by a sound/vibrating alarm signal. The authorized staff owns a dashboard web with available data to simply retrace any contacts. Besides, it makes possible to display the interaction/gathering statistics also optimizing all flows procedures and minimizing the risk of contagious. SAFE TAG works on Cloud or on a local network both in a stand-alone way and combined with smartphones. A very easy way of working, for which in any case SAIMA gives a 7/7 days service and customizing options to meet any custom's need.
