

FOR THE HEALTH OF TODAY AND TOMORROW. THE OFFICINA DELLE IDEE (WORKSHOP OF IDEAS) IN AREZZO

New talents for the improvement of our Health Services in Italy. In fact, real change comes from professionals and Saima Sicurezza is always present for innovation and the culture of ideas. Attention is paid to all new technologies and tools useful for integrated home care, but also to the safety of patient and healthcare professionals' care. Many new clinical and hospital projects, for the public and the private sector: opportunities for a new hospital-territory network and for the home, as a safer place of care. Like every year, in Arezzo, the success of the exhibition and not only virtual space was dedicated to the **Forum Risk Management** to present new technologies, for a better and safer life also in the healthcare sector.

ATLAS Project

The ATLAS project was developed by Saima Sicurezza as a solution to multiple problems in the hospital environment:

- tracking the positions of patients and/or employees within the hospital facility.
- control of the entrances and exits in the structure and on the various floors.
- localisation of assets (e.g. ultrasound, defibrillators) for the optimisation of logistics.
- prevention of possible falls from bed of patients in post-operative situations.
- the possibility of reconstructing the history of the positions of a given asset/person (e.g. analysis of dangerous situations).

Special

Purifying Smart and Aria buona 4 fans

These are our air sanitising systems for every type of environment. SAIMA's commitment to making every habitat healthier, where more people need to stay for a long time and at the same time continues and gives life to increasingly high-performance systems. From classrooms, hospitals, ambulances, cars... whether indoors or in vehicles, the imperative is the same: to make the air as pure as possible. PURIFICO SMART and ARIA BUONA 4 FANS are the latest solutions presented by SAIMA, respectively for each type of vehicle or indoor location.

Next2me

The collaboration between Saima Sicurezza and Kell for the creation of innovative devices that are easy to activate for telemedicine services (visits and "medical" services not in person) is truly innovative: in this way, it is possible to be near people even at a distance.
